

How to put html links into the FacetMap XML file?

Step 1.

Open an XML file (example: [wine-202.xml](#))

Step 2.

Scroll down to find the **resources** section. They are the different wine products in this case.

Step 3.

Find a resource element you want to show up as a link.

Say we want to add a link to this **“Vigilance Cabernet Sauvignon 2017”** product displayed below:

```
<resources>
  <resource title="Vigilance Cabernet Sauvignon 2017">
    <map heading="cab"/>
    <map heading="cnc"/>
    <map heading="14"/>
  </resource>
```

Step 4.

Add an **href attribute** inside the **resource** element as follows:

```
<resources>
  <resource title="Vigilance Cabernet Sauvignon 2017" href="
https://www.wine.com/product/vigilance-cabernet-sauvignon-2017/534634">
    <map heading="cab"/>
    <map heading="cnc"/>
    <map heading="14"/>
  </resource>
```

Step 5.

Save and upload this updated document to [FacetMap](#) if you want to interact with a demo using your XML file.

Here is an [example demo](#) once you've added all the html links in.
